SPECIFICATIONS

- Post is constructed of white powder coated aluminum to prevent warping and remain straight.
- Panel is assembled using white engineer grade reflective sheeting, with blue and green ink.
- Outer yellow bollard is a durable plastic which simulates a formidable concrete barrier for added conspicuity. Prevents bumper damage to metal post.
- Unit has a reactive spring assembly that allows the signpost to be bumped by vehicles, rebound, and return upright.

RECOMMENDED USES

- Three (3) post heights available to comply with most ADA requirements. Refer to your local guidelines for details.
- Asphalt, concrete, or in-ground installation
- Use where occasional bumping by vehicles can damage traditional signposts causing costly repairs or replacement.
- Sign is available with "Van Accessible" legend.
