

Case Study: Modular Capabilities for Unique Applications

Customer

European Leader in Metal Fabrication

Situation

As an industry leader, the safety of their employees and equipment was a top of the priority for the fabricator. But finding a solution to fit the unique footprint of their facility would require specific protection not easily accessible.

Solution

Working through Industriales de Manutención, an Impact Recovery SlowStop® protective guarding distributor in Spain, they were able to create the perfect solution. SlowStop's one of kind modular capabilities and stopping power were a perfect fit for the fabricator. The Impact Recovery engineering team worked to create customized drawings for their specific safety and protection needs. The ability to have open communication with the Impact Recovery team throughout the project made the process seamless, creating a solution that once installed would not need any additional modifications.

The fabricator is already looking for Impact Recovery for additional SlowStop products for upcoming projects, since it is the only solution available to be so completely adaptable to any unique situation.
